

Geography Focus:	Continents and Oceans	Year: 2
------------------	------------------------------	---------

(Key Vocabulary / Spellings)

Continent	Ocean	Equator	Asia
North/South America	Africa	Antarctica	Europe and Australia

(Key Knowledge)

Continent	
What is a continent?	A continent is a very large land mass. It is made up of many countries. A continent is usually separated by water or other natural features like mountains. There are 7 continents in the world: Asia, Africa, North America, South America, Antarctica, Europe and Australia.
Which continents have hotter climates?	There is an imaginary line that runs around the earth called the equator. The countries located near the equator have a hotter climate
What continent do we live in?	Europe

Ocean	
What is an ocean?	An ocean is a very large area of salt water. Most of the earth is covered in water. It contains different seas. There are five oceans on the earth: Pacific Ocean, Atlantic Ocean, Indian Ocean, Southern Ocean and Arctic Ocean.
Why are oceans so important?	There are 700,000 species of animal that live in the ocean. It is important to protect the oceans to make sure their habitats are safe. The ocean is also full of tiny plants that help to produce oxygen, which we need to breath. The ocean also provides food for many species.
